

Summary of Changes

Oracle

The Oracle application has undergone minor changes as a result of the upgrade to version 11.5.10. The differences are mainly cosmetic in nature such as "buttons" being replaced by tabs and increasing the size of pop up windows. The User Memos for each module, which are located at https://arc.publicdebt.treas.gov/uat_plans_and_information.htm, describe the changes in detail.

Discoverer

The upgraded Discoverer application offers added additional functionality to the Discover Plus offering. Most users have been able to easily use the product without additional training. Discoverer Viewer remains largely unchanged from the current version. A matrix of Discoverer features can be found at https://arc.publicdebt.treas.gov/uat_plans_and_information.htm.

PRISM

Upgrades to Oracle and Discoverer have had no effect on the PRISM application. The interface to Oracle has been tested thoroughly and PRISM users should experience no changes.
